

Our Vision

7th Generation Design's vision is to create lasting freedom in time, health, wealth and spirit for current and future generations.

Our Mission

We design, implement and steward regenerative ecosystems that continuously increase ecological health and function, create an abundance of clean water and food, and restore cultural integrity.

Why 7th Generation Thinking?

The decisions we make today belong to more than just ourselves and the present moment. They ripple outward through time, bridging the past with the present in which we create the future our descendants will inherit. Seventh generation systems meet the needs of the present *and* create abundance for future generations by aligning current and future needs with nature's rhythm and process.

How Can We Help You Bring Your Vision To Life?

THE FUTURE IS A CHOICE

WHAT WILL YOURS BE?

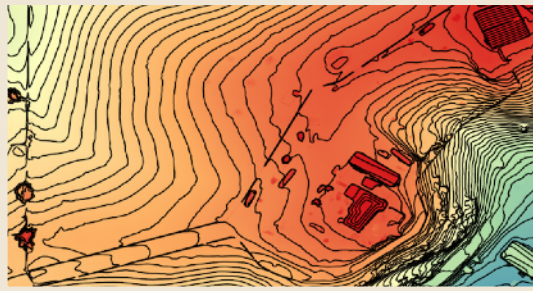

7TH GENERATION
DESIGN

Resilient Landscapes For A
Prosperous Future

OUR DESIGN PROCESS

Design is born of place and the beings that inhabit it. Every landscape we get to work with is its own unique blend of climate, topography, plant communities, wildlife and people. In this way, no two designs are ever exactly alike. However, the principles that govern our decision-making and the processes by which we make them follows a consistent framework we call **SADIMEA**:

Survey > Analysis > Design > Implementation > Maintenance > Evaluation > Adjustment

WHAT WE DO

7th Generation Design works with landowners, farmers and ranchers to design and implement regenerative broad-acre landscapes. Services we provide include:

- Fundamental Site Assessment
- High-Resolution Aerial Mapping
- Whole-Site Design for:
 - Comprehensive Water Management
 - Soil Health
 - Resilience in a Drought-Prone Fire Ecology
 - Highly Productive Orchards and Market Gardens
 - Agroforestry Systems
 - Energy Efficiency Audits
- Planning, Implementation and Oversight of Mainframe Earthworks, Plant Propagation, Tree Planting, Irrigation and More
- Government Grant and Investment Funding Guidance

WHO WE WORK WITH

...LANDOWNERS LOOKING TO:

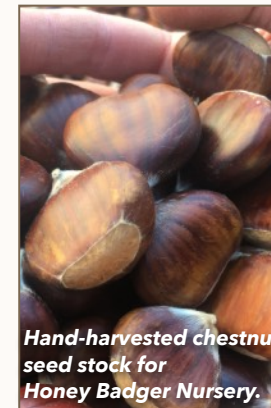

- Ensure resilience and longevity in the face of fire, drought and flood.
- Create a diverse array of food, materials and income from their property.
- Pass on a legacy of abundance and land stewardship to descendants and heirs.

...RANCHERS LOOKING TO:

- Develop year-round drought-hardy forage systems.
- Improve soil and livestock health.
- Capitalize on grant opportunities to increase ecosystem function.

...FARMERS LOOKING TO:

- Drastically reduce input costs.
- Create resilience in the face of disease and shifting environmental extremes.
- Improve and diversify yields.

Hand-harvested chestnut seed stock for Honey Badger Nursery.

Newly planted no-till market garden beds.
